

**Compte rendu du projet**  
**Administration réseau(Serveur**  
**BDD)**

**OUMENSKOU Youssef**

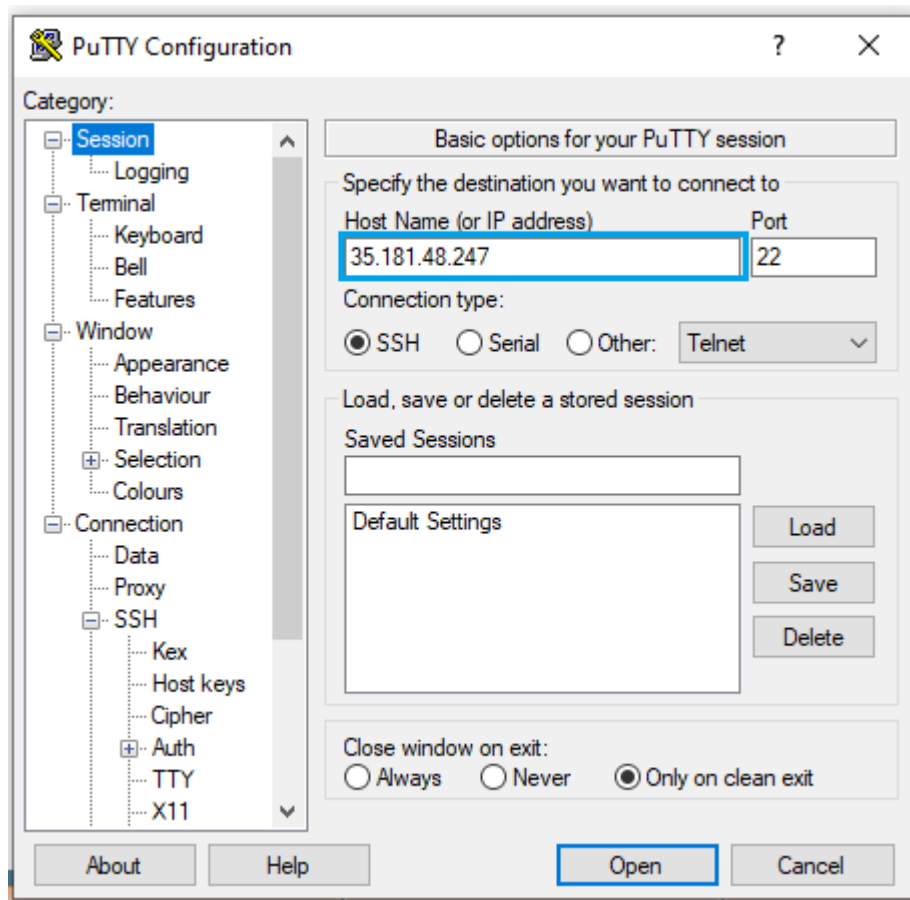

**Sommaire:**

- I. PuTTY Configuration.**
- II. Mise à jour des packages.**
- III. création de groupes.**
- IV. création des utilisateurs.**
- V. configuration du ssh.**
- VI. configuration fail2ban.**
- VII. Installation et configuration de serveur BDD.**

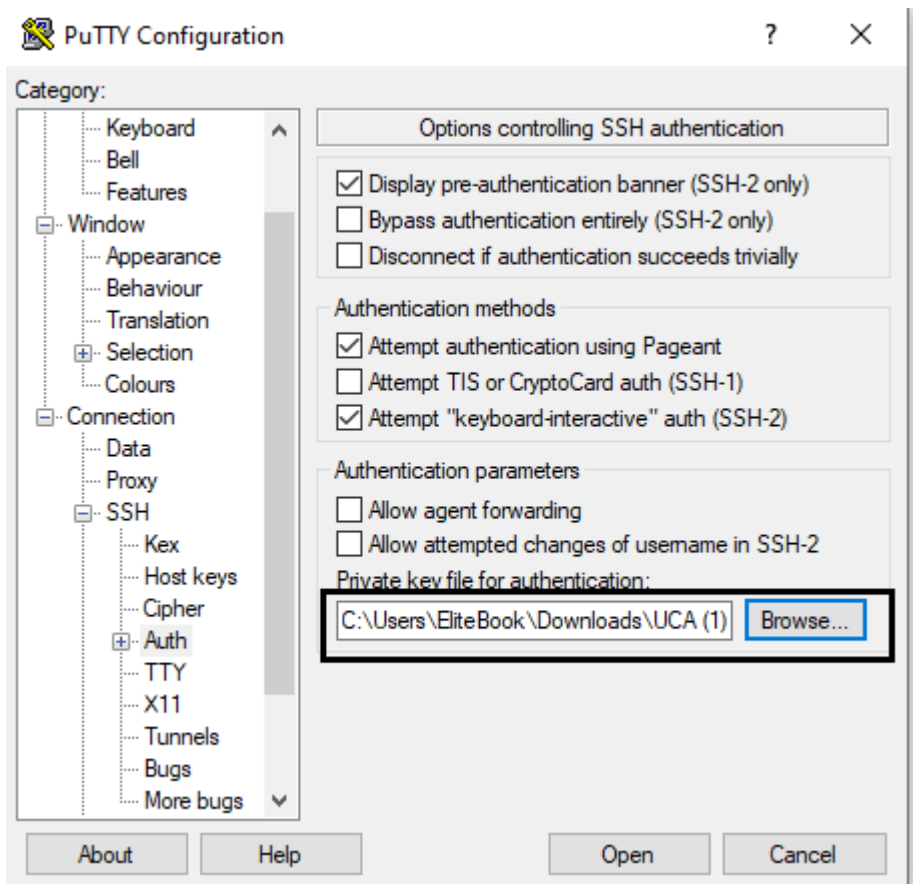

***Team : UCA***

## PuTTY Configuration:

❖ l'adresse ip public

❖ On ajout ici la clé ssh

### Mise à jour des packages:

- ❖ tout d'abord il faut faire la mise à jour des packages en utilisant les deux commandes suivantes:
  - "sudo apt-get update".
  - "sudo apt-get upgrade".

```
admin@ip-172-31-46-172:~$ sudo apt-get update
Hit:1 http://security.debian.org/debian-security bullseye-security InRelease
Hit:2 http://cdn-aws.deb.debian.org/debian bullseye InRelease
Hit:3 http://cdn-aws.deb.debian.org/debian bullseye-updates InRelease
Hit:4 http://cdn-aws.deb.debian.org/debian bullseye-backports InRelease
Hit:5 http://repo.mysql.com/apt/debian bullseye InRelease
```

```
admin@ip-172-31-46-172:~$ sudo apt-get upgrade
Reading package lists... Done
Building dependency tree... Done
Reading state information... Done
Calculating upgrade... Done
```

### 1-)création des groupes:

admin@ip-172-31-46-172: ~

```
admin@ip-172-31-46-172:~$ sudo groupadd members
admin@ip-172-31-46-172:~$ sudo groupadd admins
admin@ip-172-31-46-172:~$
```

## 2-)création des utilisateurs:

- ❖ pour créer les utilisateurs on utilise la commande “sudo adduser <username>”

```
admin@ip-172-31-46-172:~$ sudo useradd alexis -g admins -m
admin@ip-172-31-46-172:~$ sudo useradd youssef -g admins -m
admin@ip-172-31-46-172:~$ sudo useradd hamza -g members -m
admin@ip-172-31-46-172:~$ sudo useradd khaoula -g members -m
admin@ip-172-31-46-172:~$ sudo useradd oussama -g members -m
admin@ip-172-31-46-172:~$ sudo useradd hicham -g members -m
```

- ❖ Pour donner les droits d’administrateur aux utilisateurs( alexis et youssef) on utilise la commande “sudo usermod -aG”.

admin@ip-172-31-46-172: ~

```
admin@ip-172-31-46-172:~$ sudo usermod -aG sudo alexis
admin@ip-172-31-46-172:~$ sudo usermod -aG sudo youssef
admin@ip-172-31-46-172:~$
```

- ❖ Pour changer le password des utilisateurs on utilise la commande “sudo passwd <username>”:
  - Password de admin: admin\*12345
  - Password de alexis: alexis\_network

```
admin@ip-172-31-46-172:~$ sudo passwd admin
New password:
Retype new password:
passwd: password updated successfully
admin@ip-172-31-46-172:~$ sudo passwd alexis
New password:
Retype new password:
passwd: password updated successfully
admin@ip-172-31-46-172:~$ sudo passwd youssef
New password:
Retype new password:
passwd: password updated successfully
admin@ip-172-31-46-172:~$
```

## 3-)configuration du ssh:

- ❖ Pour donner l'autorisation aux nouveaux utilisateurs et admin à connecter avec le mot de passe ,on va modifier le fichier “/etc/ssh/sshd\_config” avec la commande “sudo vi /etc/ssh/sshd\_config”:
  - On va changer “no” par “yes”

```
# For this to work you will also need host keys in /etc/ssh/ssh_known_hosts
#HostbasedAuthentication no
# Change to yes if you don't trust ~/.ssh/known_hosts for
# HostbasedAuthentication
#IgnoreUserKnownHosts no
# Don't read the user's ~/.rhosts and ~/.shosts files
#IgnoreRhosts yes

# To disable tunneled clear text passwords, change to no here!
PasswordAuthentication yes
#PermitEmptyPasswords no

# Change to yes to enable challenge-response passwords (beware issues with
# some PAM modules and threads)
ChallengeResponseAuthentication no
```

- On va ajouter cette ligne a la fin de fichier “AllowGroups sudo members” pour permettre aux utilisateurs qui appartiennent à ces groupes de se connecter à la machine.

```
# Example of overriding settings on a per-user basis
#Match User anoncvs
#    X11Forwarding no
#    AllowTcpForwarding no
#    PermitTTY no
#    ForceCommand cvs server
ClientAliveInterval 120
AllowGroups sudo members
```

- Après on tappe la commande “sudo systemctl restart sshd”.

```
admin@ip-172-31-46-172:~$ sudo vi /etc/ssh/sshd_config
admin@ip-172-31-46-172:~$ sudo systemctl restart sshd
admin@ip-172-31-46-172:~$
```

- pour se connecter à ssh on doit entrer le mot passe.

```
youssef@ip-172-31-46-172: ~  
login as: youssef  
Server refused our key  
youssef@35.181.152.124's password:

youssef@ip-172-31-46-172:~$
```

#### **4-)configuration fail2ban:**

- ❖ Installation de fail2ban via la commande “sudo apt-get install fail2ban”

```
admin@ip-172-31-46-172:~$ sudo apt-get install fail2ban  
Reading package lists... Done

admin@ip-172-31-46-172:~$
```

- ❖ On affiche le statut de fail2ban via la commande “sudo systemctl status fail2ban”

```
admin@ip-172-31-46-172:~$ sudo systemctl status fail2ban
● fail2ban.service - Fail2Ban Service
   Loaded: loaded (/lib/systemd/system/fail2ban.service; enabled; vendor preset: enabled)
   Active: active (running) since Mon 2022-11-21 14:56:04 UTC; 1min 14s ago
     Docs: man:fail2ban(1)
  Process: 15048 ExecStartPre=/bin/mkdir -p /run/fail2ban (code=exited, status=0/SUCCESS)
 Main PID: 15049 (fail2ban-server)
    Tasks: 5 (limit: 1123)
   Memory: 17.2M
      CPU: 250ms
   CGroup: /system.slice/fail2ban.service
           └─15049 /usr/bin/python3 /usr/bin/fail2ban-server -xf start

Nov 21 14:56:04 ip-172-31-46-172 systemd[1]: Starting Fail2Ban Service...
Nov 21 14:56:04 ip-172-31-46-172 systemd[1]: Started Fail2Ban Service.
Nov 21 14:56:04 ip-172-31-46-172 fail2ban-server[15049]: Server ready
admin@ip-172-31-46-172:~$
```

- ❖ Faire une copie de fichier de configuration pour éviter de l'écraser lors de mise à jour de package.

```
admin@ip-172-31-46-172: ~
admin@ip-172-31-46-172:~$ sudo cp /etc/fail2ban/jail.conf /etc/fail2ban/jail.local
admin@ip-172-31-46-172:~$
```

- ❖ On modifie le fichier de configuration via la commande “sudo vi /etc/fail2ban/jail.local”.
  - On ajoute les adresses ip privées des utilisateurs et l'adresse ip locale de la machine afin que fail2ban les ignore.

```
# "ignoreip" can be a list of IP addresses, CIDR m
# will not ban a host which matches an address in
# can be defined using space (and/or comma) separa
ignoreip = 127.0.0.1/8 ::172.31.46.172 172.31.33.1

# External command that will take an tagged argume
# and return true if the IP is to be ignored. Fals
#
# ignorecommand = /path/to/command <ip>
ignorecommand =

# "bantime" is the number of seconds that a host i
bantime = 3m

# A host is banned if it has generated "maxretry"
# seconds.
findtime = 3m

# "maxretry" is the number of failures before a ho
maxretry = 3
```

- ❖ On redémarre le serveur fail2ban et on affiche son statut.

```

admin@ip-172-31-46-172:~$ sudo systemctl restart fail2ban.service
admin@ip-172-31-46-172:~$ sudo systemctl status fail2ban.service

```

## Etape 2: installation de serveur MySQL

❖ Installation de serveur mysql via la commande “sudo apt install mysql-server”

```

172-31-46-172:/tmp$ sudo apt install mysql-server
Package lists... Done
Building dependency tree... Done
Reading state information... Done
The following additional packages will be installed:
  lib-compat4 libmecab2 libnumal libperl5.32 mecab-ipadic mecab-ipadic-utf8 mecab-utils
  mysql-client mysql-common mysql-community-client mysql-community-client-core
  mysql-community-client-plugins mysql-community-server mysql-community-server-core perl
  perl-modules-5.32
The following NEW packages will be installed:
  libterm-readline-gnu-perl | libterm-readline-perl-perl make
  perl-harness-archive-perl
The following NEW packages will be installed:
  lib-compat4 libmecab2 libnumal libperl5.32 mecab-ipadic mecab-ipadic-utf8 mecab-utils
  mysql-client mysql-common mysql-community-client mysql-community-client-core
  mysql-community-client-plugins mysql-community-server mysql-community-server-core
  mysql-server perl perl-modules-5.32
0 to remove, 17 newly installed, 0 to remove and 1 not upgraded.
Need to get 49.4 MB of archives.
After this operation, 401 MB of additional disk space will be used.
Do you want to continue? [Y/n] Y

```

Configuring mysql-community-server

Please provide a strong password that will be set for the root account of your MySQL database. Leave it blank to enable password less login using UNIX socket based authentication.

Enter root password:

\*\*\*\*\*

<Ok>

Configuring mysql-community-server

Now that you have selected a password for the root account, please confirm by typing it again. Do not share the password with anyone.

Re-enter root password:

\*\*\*\*\*

<Ok>

❖ Affiche le statut de mysql

**Team : UCA**

```
admin@ip-172-31-46-172:/tmp$ sudo systemctl status mysql
● mysql.service - MySQL Community Server
   Loaded: loaded (/lib/systemd/system/mysql.service; enabled; vendor preset: enabled)
   Active: active (running) since Mon 2022-11-21 15:19:42 UTC; 26s ago
     Docs: man:mysqld(8)
           http://dev.mysql.com/doc/refman/en/using-systemd.html
  Main PID: 17305 (mysqld)
    Status: "Server is operational"
     Tasks: 39 (limit: 1123)
  Memory: 363.8M
     CPU: 971ms
    CGroup: /system.slice/mysql.service
            └─17305 /usr/sbin/mysqld

Nov 21 15:19:42 ip-172-31-46-172 systemd[1]: Starting MySQL Community Server...
Nov 21 15:19:42 ip-172-31-46-172 systemd[1]: Started MySQL Community Server.
admin@ip-172-31-46-172:/tmp$
```

### Etape 3:sécurité

- ❖ Effectuer des mises à jour liées à la sécurité via la commande "mysql\_secure\_installation".

```

admin@ip-172-31-46-172:/tmp$ mysql_secure_installation

Securing the MySQL server deployment.

Enter password for user root:
The 'validate_password' component is installed on the server.
The subsequent steps will run with the existing configuration
of the component.
Using existing password for root.

Estimated strength of the password: 25
Change the password for root ? ((Press y|Y for Yes, any other key for No) : N

... skipping.
By default, a MySQL installation has an anonymous user,
allowing anyone to log into MySQL without having to have
a user account created for them. This is intended only for
testing, and to make the installation go a bit smoother.
You should remove them before moving into a production
environment.

Remove anonymous users? (Press y|Y for Yes, any other key for No) : Y
Success.

Normally, root should only be allowed to connect from
'localhost'. This ensures that someone cannot guess at
the root password from the network.

Disallow root login remotely? (Press y|Y for Yes, any other key for No) : Y
Success.

By default, MySQL comes with a database named 'test' that
anyone can access. This is also intended only for testing,
and should be removed before moving into a production
environment.

Remove test database and access to it? (Press y|Y for Yes, any other key for No) : Y
- Dropping test database...
Success.

- Removing privileges on test database...
Success.

Reloading the privilege tables will ensure that all changes
made so far will take effect immediately.

Reload privilege tables now? (Press y|Y for Yes, any other key for No) : Y
Success.

```

### Étape 4: connexion à mysql, création de base de données, et tableau pour tester.

- ❖ On se connecte au serveur mysql via la commande “mysql -u root -p”.

```

admin@ip-172-31-46-172:~$ mysql -u root -p
Enter password:
Welcome to the MySQL monitor.  Commands end with ; or \g.
